- We have gone bird watching in the mornings, afternoons, late evenings and night.
- We went bird watching two times a week during the months of January, february and March.
- Each bird watching trip lasted over an hour and we maintained a record of the weather conditions during that hour.
- We saw a variety of birds on campus of which our favourites were : The Indian Roller, Small Green bee eater, Kingfisher, Woodpecker, Red-Vented Bulbul and the Blue throat.
